

TEST REPORT**CLIENT'S DESCRIPTION**

100% Cashemre Pullover, Weight: 192 grams, Origin: Mongolia,
Size: S, Colour: Dark blue

Client: SGS Austria Controll-Co. Ges.m.b.H
Address: Grunbergstrasse 155, A-1120 Wien, Austria

In pursuance of an order received from client mentioned above, SGS were requested to carry out fibre analyses of the sample which was declared as above.

TEST RESULTS

Textiles -- Quantitative analysis of cashmere, wool, other specialty animal fibers and their blends

Part 1: Light Microscopy method (BS EN ISO 17751-1: 2016)

Fibre	Cashmere *
Number of fibres identified	1000
Result (% by Number)	100

Determination of Fibre Diameter by the Projection Microscope (IWTO-8: 2011)

Mean Fibre Diameter (µm):	16.5
Coarse Hair Content(%):	nil
Number of snippets:	600
CV%:	20.7

Single Fibre Length (BS ISO 6989: 1981)

Mean Fibre Length (mm):	37.0	Fibres less than 20mm (%):	25.3
Number of fibres:	501	Fibres less than 30mm (%):	45.3
CV%:	60.4	Fibres less than 40mm (%):	59.3
95% Confidence limit(mm):	± 2.0	Fibres less than 50mm (%):	73.9

Remark:

*Fibres that have the characteristics of cashmere fibre morphology, with Mean Fibre Diameter not greater than 19µm, Coefficient of Variation not greater than 24% and Coarse hair content not greater than 3% (by weight) as defined by CCMI.

Fibre content by light microscopic method is subjective and the conclusion is made base on visual assessment of fibre morphologies only. It is recommended to confirm the fibre identity by using an objective test method if any dispute.

Trace Contamination found during testing which is in the error tolerances of the test method.

The present report reflects our findings on the sample(s) received and analysed only and this within the limits of Client's instructions, if any.
